Subject index

a-SiC 379
ab initio calculations 118
Absorption 217, 284, 362
Absorption, infrared 264
Absorption, photo-induced 245
AC admittance 433
Acceptor impurities 128
Acceptors 118, 154, 199
Activation energy 480
AES 85
AlAs 546
AlGaN 428
AlN 99, 410, 422
AlN, under pressure 426
All-optical properties 332
Amorphous films 542
Atomic layer epitaxy 65
Auger electron spectroscopy 94
Auger spectroscopy 415

Band gap problems 400
Band offset modification 546
Band offsets 557
Band structure 389, 394, 410
Binding energy 297
Bipolar junction transistor 461
BN 410
BN films 228
Bound excitons 325
Buffer 36
Bulk crystals 357

Capacitance–voltage measurements 508
Carbon systems, π-bonded 539
Carbonization 79
Carrier density 308
Cathodoluminescence 319
Cavities 211
CdMnTe 490
CdS films, thin 332
CdSe 575
CdS_xSe_{1-x} 505
CdTe 505
$Cd_{0.33}Zn_{0.67}Te$ 566
Charge density distribution 422
Chemical vapor deposition 308
Compensation 118, 313, 433
Complexes 433
Configuration interactions 255
Contacts 585
Crystal growth 99
Cu 512
CuCl 588
$CuGaS_2$ 348
Cu_{Zn}^{2+} 239
CVD 75, 79, 580
Cyclotron resonance 384

DA-centers 336
Decay rates 593
Deep emission 250
Deep-level transient spectroscopy 264
Defects 228, 284
Defects, isoelectronic 336
Density functional calculation 404
Density of states 415
DH-structure 428
Diamond 132, 144, 150, 179, 284, 400, 471, 512, 539
Diamond devices 1
Diamond film growth 94, 528
Diamond films 90, 228
Diamond growth 85
Diamond growth phase diagrams 90
Diamond thin films 1
Diamond, natural 222
Diamond, polycrystalline 217
Diamond, synthetic 222
Dielectric function 342, 389
Diffusion 144, 580
Diffusion coefficient 471
Diode lasers, blue–green 16
Dislocations 79
Donor impurity levels 384
Doping 132, 144, 174
Doping efficiency 128
Doping limits 118
Dynamical behaviour 325

Electrical properties 308
Electrochemical profiling 508

Electron affinity 528
Electron cyclotron resonance 36
Electron diffraction, reflection high-energy 415
Electronic band structure 404
Electronic properties 366
Electronic structure 325, 512
Electroreflectance 394
Electrostatic model 65
Ellipsometry 342, 580
Emission channeling 150
Epitaxial growth 65
Epitaxy 50, 79
Epitaxy, liquid-phase 440
EPR 228
Evaporation 211
Exciton dynamics 566
Exciton localization 336
Exciton localization, quantum well 362
Exciton scattering 352
Exciton–exciton interaction 588
Excitonic polaritons 348
Excitons 16, 313, 551, 588

Far-infrared 384
Far-infrared reflectivity 174
Free-exciton energy 348

Ga 174
GaAs 505, 546, 557, 580
GaAs–AlGaAs 319
GaN 1, 36, 99, 190, 404, 410, 415, 422, 428, 480
GaN films 228
GaN, under pressure 426
$Ga_{0.5}In_{0.5}P$ 475
Ge 557
Gradient-stage buffer 85
GRINSCH 490

6H–SiC 75, 461
H 217, 512
Hall measurements 264
Hall mobility 308
Heteroepitaxy 250
Heterojunctions 485, 557, 580
Heterostructures 490
High gas pressure 99
High pressure 410
High temperatures 453, 471
High-field transport 466
High-pressure phases 422
Highly excited semiconductors 352
Homoepitaxy 75, 103
Homojunctions 546

I 508
II–VI MQW 352
II–VI semiconductors 154, 255
Impact excitation 480
Impact ionization 475, 500
Implantation 150, 174
Impurities in diamond 179
In 207, 297, 585
InN 99, 190, 410, 422
Infrared analysis 217
Interdiffusion 546
Interface 250
Interface dipole 546
Interface energy 512
Interface states 542
Interfaces, metal–diamond 528
Interstitials 128, 159
Ion implantation 132, 207
Ionic model 159
Ionicities 426
Isotopes 284

Jahn–Teller interaction 239

Laser 490, 505
Laser CVD 50
Laser devices 16
Laser diode, blue–green 27, 112
Laser diode, green 112
Laser irradiation 164
Lasers, II–VI 490
Lasers, electron-beam-pumped 505
Lattice dynamics 426
LED 16, 480
LED, blue 500
Li 118, 297, 433
LMTO 410
Local modes 284
Luminescence 250, 264, 284, 357, 575, 593
Luminescence decay 603
Luminescence oscillations 332
Luminescence, transient 571
Luttinger parameter 169

Macrodefects 211
Magnetic fields, megagauss 384
Magnetic semiconductors, diluted 259
Magneto-optics 239
MAS-NMR data 366
MBE 36, 164, 357
MESFET 461
Metallic vacancy 297

$Mg_yZn_{1-y}Te$ 485
Microcrystals 575
Microgun 490
Migration energy 297
MIS structure 480, 500
MnSe 357
Mobility 190, 433
Modulator 496
Molecular beam epitaxy 551
Molecular dynamics, ab initio 379, 539
Monte Carlo simulation 475
Monte Carlo technique 466
MOSFET 461
MOVPE 50, 109, 174, 250, 500
MOVPE ZnTe epilayers 169
Multiplets 255

N 118, 128, 164, 174, 179, 433, 508
N donors 199
N-type doping 144
Na 118
Native point detects 118
Ni^{2+} 234
Nonvolatile memories 461
Nucleation 94

Optical absorption 190
Optical confinement 27
Optical properties, size-dependent 588
Optical reflectivity 94
Optics 551
Optoelectronics 461
Oxidation 585

p–n junction 428, 440
P-type ZnSe 112
PAC 150, 297
PECVD growth 90
Perturbed angular correlation 207
Perturbed angular distribution 259
Phase diagrams 422
Phase transition, antiferromagnetic 357
Phonon scattering 475
Photo-catalysis 50
Photocapacitance spectroscopy 542
Photodiode, ultraviolet 453
Photodiodes 453
Photoemission spectroscopy 94
Photoluminescence 164, 169, 222, 313, 348, 362
Photoluminescence, time-resolved 566
Photovoltage spectroscopy 508
Picosecond relaxation 234
Piezoelectric field effect 551
Platelet defects 179
Point defects 154, 190, 199
Polarization 575
Polytype inheritance 65
Porous silicon 319
Pseudopotential calculations, ab initio 546
Pseudopotential methods 394
Pseudopotential scheme 154

Quantum confined heterostructures 16
Quantum confinement 588, 593
Quantum dots 571
Quantum size levels 575
Quantum well laser 496, 508
Quantum wells, CdTe/CdMnTe 551
Quantum wells, ZnTe 566

Radiation 566
Radiation damage 132
Radiation induced defects 199
Radiative recombination 571
Radical doping 112
Raman scattering 174
Raman scattering, resonant 348
Recombination dynamics 603
Recombination, radiative and nonradiative 245
Rectifiers 453
Relative stability 366
Resonant-excitation methods 169
Rutherford backscattering 585

Scanning electron microscopy 94
Scattering 466
Schottky barriers 512, 528
Self-compensation 128, 159
Semiconducting alloys, amorphous 379
Semiconductors, II–VI 485
Semimagnetic semiconductors 259
Separate confinement devices 27
Shallow acceptors 169
Si, porous 593, 603
SiC 1, 65, 75, 199, 207, 211, 264, 308, 313, 366, 379, 389, 394, 440, 453, 466
SiC buffer layer 79
SIMS 580
SiN 342, 542
Single-turn coils 384
Site-selectivity 234
Size quantization 588
Solubility 118, 144
Spectroscopic ellipsometry 389
Spectroscopy, nonlinear 336
Spontaneous polarization 366

Stark effect 496
Step-controlled epitaxy 65
Stimulated emission 16, 352
Stoichiometry 342
Stokes shift 362
Strain 319
Strained quantum wells 27
Strained-layer superlattices 352
Structural defects 250
Structural properties 366
Structural relaxation 366
Structural stability 426
Substrates 103
Superlattices 109
Surface composition 94, 415
Surface morphology 36
Surface reconstruction 539
Surface-barrier structure 585
Surfaces, diamond 400
Synchrotron radiation photoemission spectroscopy 415

Thin films 357
Thin-film nonlinearity 332
Tight-binding calculation 109
Transition metal impurities 199
Transition metals 255
Transmission electron microscopy 79
Transmission oscillations 332
Transport properties 471
Tunneling 480

UV/blue LED 428

Valence band offset 109, 366, 557
Visible-light emission 593
Visible-light emitters 485

Wide band gap II–IV semiconductors 27

XPS 85

Zeeman measurements 239
ZnMnS 259
ZnS 234
ZnS films, epitaxial 500
ZnS, polymorphic 239
ZnSe 27, 50, 118, 128, 154, 159, 174, 297, 319, 325, 352, 496, 505, 508, 557, 580
ZnSe, p-type 164
ZnSe, single-crystal 103
ZnSe–Ge–GaAs 557
ZnSe–ZnTe 109
ZnSe:Li 433
ZnSe:N 433
ZnSe:Te, isoelectronically doped 245
ZnTe 585
ZnTe epilayers 250
$Zn_xCd_{1-x}S$ 505
